Foreign exchange risk for MNCs

© Anna Chmielewska, SGH 2017

FX Rate

- Fixed vs floation
- EURPLN 4.2560 4.2590
(watch the tricks e.g. at airports:
4.2560 5.2580)
- Appreciation vs Revaluation

Market quote

- **FX market-maker gives two prices:**
 - **BID**, quote at which they buy from others
 - **ASK / OFFER**, quote at which they sell

The screenshot displays two windows from a financial data terminal. The top window shows the EURPLN market quote, and the bottom window shows the PLN market quote. Both windows include a search bar, navigation buttons, and a table of market data.

EURPLN=		Latest Rates				14APR10 10:45

KEY DEFINITIONS

- **Value date**
 - Date on which the currencies are settled (through physical delivery or cash settlement)
- **Currency exposure**
 - Balance of foreign currency which value is dependent on FX rate (long or short; balance or off-balance)
- **Liquidity position**
 - Balance of local or foreign currency proceeding from mismatch of value dates of assets and liabilities
 - Liquidity position is sensitive on interest rate swings

© Anna Chmielewska, SGH 2017

5

CURRENCY EXPOSURE

- **Long position**
 - Assets in foreign currency → gives profits if FX rate of foreign currency goes up
- **Short position**
 - Liabilities in foreign currency → gives profits if FX rate goes down
- **Balance position**
 - Assets or liabilities on the current value date
- **Off-balance / cash flow position**
 - Settlement of FX cash flows will be done in the future
- **Indirect FX exposure**
 - FX changes affects competitiveness or volumes

© Anna Chmielewska, SGH 2017

6

FX TRANSACTION

- Transaction changing the currency exposure
- Rate measure is quantity of counter currency paid for the unit of the fore currency [YYY/XXX]
 - Big figures and pips, i.e. 1.3212 USD per 1 EUR
- The price is shown by market maker as
 - BID (I buy) / OFFER (ASK) (I sell)
- BID/ASK difference is called SPREAD

© Anna Chmielewska, SGH 2017

7

KEY DELIVERABLE CURRENCIES

- ❖ Major currencies
 - Key (EUR, USD, JPY, GBP, CHF)
 - Skandi (SEK, DKK, NOK)
 - Other (CAD, AUD, NZD)
- ❖ Emerging currencies
 - London based (PLN, CZK, HUF, ZAR, ILS)
 - Latam (MXN, BRL, CLP)
 - Far East (HKD, THB, SGD, PHP, KRW)

© Anna Chmielewska, SGH 2017

8

SPOT DEAL

- Standard value date on interbank market
- Two working days from the trade date:
 - Monday → Wednesday (D+2)
 - Tuesday → Thursday (D+2)
 - Wednesday → Friday (D+2)
 - Thursday → Monday (D+4)
 - Friday → Tuesday (D+4)
- Wednesday night lasts three calendar days in financial terms

9

Forward quotations

$$F_{USD} = S_{USD} \times \frac{1 + i_{PLN}}{1 + i_{USD}}$$

- **Forward rate is a rate at which we can close transaction today, but with the settlement occurring in the future**
- **Note: forward rate depends on current rate and interest rates. NO dependence on expectations!**

© Anna Chmielewska, SGH 2017

10

Quotations in practice (I)

Spot = 2.5000 1Y Forward = 2.5601

USD/PLN	bid	ask
USD/PLN	2.4950	2.5050
1Y	600	602

- How to read those?
 - **Forward bid: $2.4950+0.0600=2.5550$**
 - **Forward ask: $2.5050+0.0602=2.5652$**

© Anna Chmielewska, SGH 2017

11

Forward below spot (hrywna/złoty)

**Spot = 0.5020; UAH Libor = 15%;
Wibor = 6.5% 1Y Forward = 0.4649**

UAH/PLN	bid	ask
UAH/PLN	0.5000	0.5040
1Y	372	370

- **How shall we read it?**
 - **Forward bid to $0.5000-0.0372=0.4628$**
 - **Forward ask to $2.5050-0.0370=0.4670$**

12

Lufthansa – case study

- January 1985 – order for 20 Boeings 737
- Delivery: next year
- Payment \$500M at delivery
- Exchange rate at contract date DM 3.2/\$

© Anna Chmielewska, SGH 2017

What can be done?

- What choices can be made
- What did Heinz Ruhnau do?
- What were the consequences?

© Anna Chmielewska, SGH 2017

What made the selection tricky?

- USD had appreciated against DM
- Analysts' consensus indicated that the trend was to revert: USD was expected to depreciate against DM (as the terms of trade in the US have already weakened). Nobody knew when and by how much.
- Heinz Ruhnau decided \$500M is too much risk for his company – therefore it needs to be hedged
- Spot = Forward

© Anna Chmielewska, SGH 2017

© Anna Chmielewska, SGH 2017

Ruhnau strategy: 50-50

- \$250M unhedged
- Forward hedge for \$250M

© Anna Chmielewska, SGH 2017

A year later: 2.3DEM/USD

© Anna Chmielewska, SGH 2017

What were the results

Lufthansa costs:

- Unhedged portion:
 $\$250\text{mio} * \text{DM } 2.3/\$ = \text{DM } 575\text{mio}$
- Hedged portion:
 $\$250\text{mio} * \text{DM } 3.2/\$ = \text{DM } 800\text{mio}$

- Total DM 1,375,000,000

© Anna Chmielewska, SGH 2017

How did it compare vs
alternatives?

© Anna Chmielewska, SGH 2017

1. No hedge

- No hedge – wait and pay
- Dollar has deoreciated in 1985 from DM3.2/\$ in 1985 down to DM2.3/\$ w 1986

The investment cost

$$\$500M * DM 2.3/\$ = DM 1,150,000,000$$

© Anna Chmielewska, SGH 2017

2. Forward hedge

- Forward and securing financing to get it settled
- Assuming all was forward hedged at DM 3.2/\$ the investment cost would be:

$$\$500M * DM 3.2/\$ = DM 1,600,000,000$$

© Anna Chmielewska, SGH 2017

Possible outcomes

© Anna Chmielewska, SGH 2017

3. Option strategy

- Purchase of FX options covering \$500M
- Possible options with strike at DM 2.5/\$ paying 1.5%
- Premium:
 $\$500,000,000 * 1.5\% * DM 3.2/\$ = DM 24,000,000$
- Alternative cost (4.5%) for premium: 25,080,000
- January 1986: DM 2.3/\$ no execution
- Cost:
 $\$500M * DM 2.3/\$ + DM 25.08M =$
 $= DM 1,175,080,000$

© Anna Chmielewska, SGH 2017

Outcomes

© Anna Chmielewska, SGH 2017

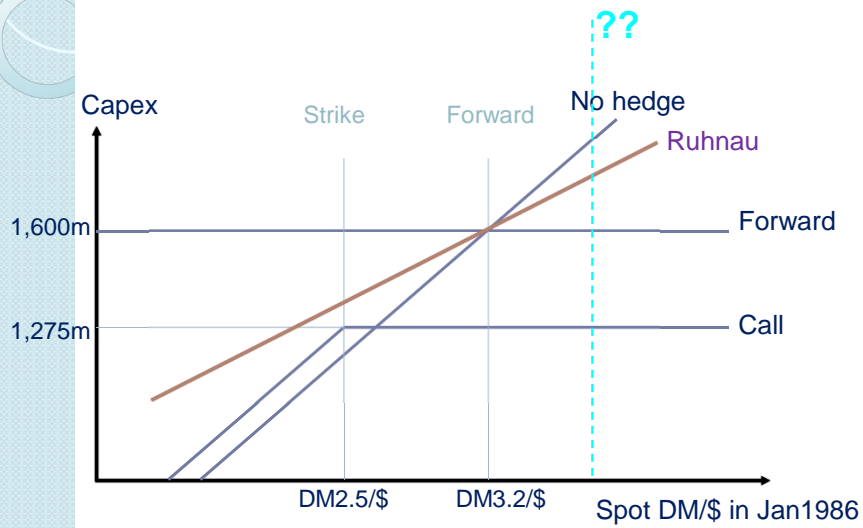

3. Options

- January 1986: DM 2.3/\$ no execution
- We assume „option may be useful”
- Maximum cost is calculated assuming option strike, here DM 2.5/\$
- $\$500M * DM 2.5/\$ + DM 25.08M =$
- $= DM 1,275,080,000$

© Anna Chmielewska, SGH 2017

Spektrum wyników

© Anna Chmielewska, SGH 2017

And what would be in opposite situation?

1. No hedge	More expensive!!!
2. Forward	No change
3. Option	A bit more expensive (max 1,275,080,000)
4. Ruhnau	More expensive!!!

© Anna Chmielewska, SGH 2017

HOW WOULD YOU ASSESS RUHNAU STRATEGY?

© Anna Chmielewska, SGH 2017

Hedging – An enemy or friend

For:

- Financial planning
- Bankruptcy
- limiting uncertainty
- selective approach allows to tune to corporate situation

Against

- Limits opportunity gains
- At shareholders cost
- Are markets in equilibrium
- Financial consequences

© Anna Chmielewska, SGH 2017

How to decide?

Available instruments („inexpensive”)
forward, future, opcje na FX i IR

Your choice should take into account

1. Liquidity
 2. Corporate risk aversion
 3. Expectations
- A. If shds believe the outcome of market move would be beneficial – **chose options**
- B. Otherwise – **select forward**

© Anna Chmielewska, SGH 2017
